Calculation for working out pro rata pay. FTE / 52.143 X Paid Weeks / 37 X working hours pw. [52.143 is the number of weeks in a year!]

- Example - Pat works 25 hours pw and 38 weeks pa. She is on KR3 [19293-FTE] She has worked at the school for a million years, so she is now entitled to 28 days annual leave. [God knows she needs the rest!] So, Pat is paid for $\mathbf{4 4 . 2 8}$ weeks a year. Once the pro rata salary is worked out it is then annualised i.e. divided by 12. So, Pat receives the same amount of pay every month. $£ 19293 / 52.142=£ 370.00$ X $25=£ 16365.18 / 37=£ 442.30 \times 25=£ 11057.55 \times 12=£ 921.46$
